PROFESSIONAL SUMMARY

Computer Information Technology professional and student with hands-on experience across enterprise desktop support, field services, systems administration, networking, cybersecurity, product operations, and full-stack software development. Experienced with Windows/macOS troubleshooting, device deployment, Active Directory, VPN/MFA, Jira ticketing, asset tracking, LAN diagnostics, virtualization, Linux servers, cloud labs, technical documentation, user support, and the software development life cycle (SDLC) from requirements and design through testing, deployment, and iteration. Bilingual in English and Spanish; B.S. in Computer Information Technology expected Spring 2027.

TECHNICAL SKILLS

IT Support & Identity: Windows 10/11, macOS, desktop/laptop troubleshooting, device imaging/deployment, printers/peripherals, Active Directory, onboarding/offboarding, VPN, Duo MFA, YubiKey, badge access, Jira ticketing, asset tracking, incident documentation

Networking, Systems & Cloud: LAN/connectivity troubleshooting, network mapping/tracing, managed Ethernet switching, Ubiquiti Dream Machine Pro, VMware ESXi/vCenter, Ubuntu/Linux, SSH, Docker, Nextcloud, Nginx, MySQL, AWS IAM/VPC/EC2

Programming & Scripting: Python, Java, JavaScript, TypeScript, C, C#, SQL, Bash, PowerShell; coursework exposure to Go, Rust, Kotlin, and Swift

Web, Data & Tools: React, Node.js, Vite, PHP, HTML/CSS, PostgreSQL, MySQL, MongoDB Atlas, Vercel, Git/GitHub, Smartsheet, Microsoft Excel, Microsoft Access, AutoCAD, Unity | SDLC: requirements gathering, feature planning, Git branching, implementation, QA/testing, deployment, iteration, technical documentation

PROFESSIONAL EXPERIENCE

Axiom Technologies | Desktop Support Engineer / Field Support Contractor | Oct 2026 - Present

- Provide on-demand, on-site desktop support for enterprise client locations, including veterinary hospitals, working independently as field "hands and feet" for remote service teams.
- Troubleshoot Windows workstations, monitors, printers, peripherals, Ethernet/power/display cabling, and basic LAN connectivity; perform PC swaps, device replacements, and workstation deployments within assigned scope.
- Capture asset tags, serial numbers, photos, and service details; communicate clearly with site contacts and remote engineers, update tickets/service visit reports, and escalate issues outside authorized scope.

StandardAero | Information Technology Intern | Jan 2026 - Aug 2026

- Provided enterprise IT support across departments, troubleshooting workstations, laptops, printers, peripherals, applications, authentication, VPN access, and connectivity issues.
- Imaged, configured, and deployed employee devices and supported onboarding/offboarding, including workstation provisioning, badge access, Duo MFA, YubiKeys, and account access.
- Administered Active Directory tasks, tracked incidents and IT assets in Jira, performed network mapping/tracing, and configured VPN access for remote and work-from-home employees.
- Used Smartsheet to reduce paper-based workflows and created AutoCAD electrical/structural layouts supporting facility and infrastructure planning.

Wick | Product Management Intern | Jun 2026 - Present

- Perform bug hunting and feature testing, document defects and product issues, and collaborate with the team on product improvements.
- Create Product Requirements Documents (PRDs) that translate user needs, product ideas, and feature expectations into clear requirements for engineering and design.
- Contribute to product research, prioritization, and cross-functional coordination around releases and feature development.

Rising LA Tech Internship | Cybersecurity Intern | Aug 2025 - Dec 2025

- Completed cybersecurity and networking work focused on NIST-aligned cyber hygiene, secure application practices, and practical risk awareness.
- Participated in one-on-one mentorship with a Microsoft cybersecurity professional, improving security-protocol questions and gaining exposure to OSINT techniques for identifying risk and protecting sensitive information.
- Collaborated on a Waymo partnership project to plan a mock autonomous-vehicle fleet launch, evaluating weather testing, city regulations, logistics, safety risks, infrastructure needs, and technical fail-safes.

All-Stars After-School Program | After-School Coach | Jun 2023 - Present

- Founded and lead a Coding for Kids club serving approximately 30 middle school students, teaching programming fundamentals, command-line concepts, and basic web formatting.
- Design and manage engaging activities while building communication, organization, time-management, and user-support skills.

Universal Studios Hollywood | Parking Ambassador | Aug 2022 - Jun 2023

- Coordinated teams averaging 10 employees to support efficient parking operations, guest flow, and a safe customer experience.
- Used a parking management system to assist employees with ID-based parking access and delivered high-volume customer service in a fast-paced environment.

Branford Quality Finishing | Secretary / IT Assistant | Jan 2016 - Sep 2022

- Provided office and warehouse IT support for approximately 10 employees, troubleshooting macOS systems, legacy computers, printers, business software, and connected industrial equipment.
- Built and maintained a print server supporting 10 offline devices; supported computer wipes, endpoint upkeep, onboarding/offboarding, and Active Directory-related tasks.
- Refined SQL components in an in-house invoicing application and supported surveillance logging plus network-connected ovens, timers, and production systems.

TECHNICAL PROJECTS & LABS

Motivo - Senior Design Project | Full-Stack SaaS Platform | Node.js, Express, MySQL, Nginx, PM2, Git/GitHub

- Led development of a production-hosted automotive service platform connecting customers with repair shops, with scheduling, shop/customer workflows, account management, email notifications, and planned VIN decoding through NHTSA vPIC.
- Applied the software development life cycle (SDLC) across requirements gathering, feature planning, system/database design, implementation, Git branching and team integration, QA/bug fixing, deployment, monitoring, and iterative UI/UX improvement.
- Deployed and maintained the application on an Ubuntu production server using Node.js/Express, MySQL, Nginx reverse proxying, PM2, HTTPS/Certbot, security middleware, rate limiting, and health monitoring; coordinated feature work and sprint tracking with teammates.

Home Lab & Self-Hosted Infrastructure | *Ubuntu 24.04, Docker, Nextcloud, Nginx, MySQL, managed switch, SSH*

- Built and operate an Ubuntu homelab using repurposed hardware, a managed Ethernet switch, physical rack hardware, structured Ethernet cabling, Docker services, and Nextcloud for self-hosted storage and file access.
- Administer services through SSH, troubleshoot network/storage issues, maintain Nginx-hosted applications and MySQL-backed services, and perform recovery/validation work on multi-terabyte storage.
- Configured monitoring for server/application availability and worked with local AI tooling, including Ollama/Phi-3, within the home-server environment.

Enterprise Server & Network Lab | *VMware ESXi, vCenter, Ubiquiti Dream Machine Pro*

- Wiped and prepared physical servers and network hardware; installed VMware ESXi, configured a Ubiquiti Dream Machine Pro, and deployed vCenter for centralized virtualization management.
- Used the environment to practice server administration, network connectivity validation, virtual infrastructure management, and troubleshooting.

AWS Academy Cloud Labs | *IAM, VPC, EC2*

- Configured IAM users, groups, and policies, validated permissions, built a VPC, and launched an EC2 web server to practice cloud identity, networking, and compute fundamentals.

MissionSecure / Cyber Hygiene Web Application | *React, TypeScript, Vite, Node.js, MongoDB Atlas, Vercel*

- Built and deployed a cybersecurity ethics and cyber-hygiene assessment that evaluates users, provides automated feedback, and generates personalized recommendations for improving security awareness.
- Contributed frontend design and security work, including user-friendly flows and safe client-to-server handling of application data.

Virtualized Company Network Lab | *VMware, Windows 10, Cisco Packet Tracer*

- Built sandbox environments to simulate a small company network with approximately 20 users and 10 mobile workstations, combining virtual machines with network mapping and routing concepts.

Web Development & Production Hosting | *React, TypeScript, Node.js, Express, MySQL, Nginx, PM2, GitHub*

- Built and maintained web applications and portfolio projects, including Linux-hosted Node/Express services, MySQL databases, Nginx reverse proxying, GitHub-based deployment, and production process management with PM2.
- Applied security middleware, authentication/permission concepts, responsive UI work, and deployment troubleshooting in production-style environments.

ERP Systems Analysis | *Infor CloudSuite, SAP S/4HANA, Oracle NetSuite, Microsoft Dynamics 365 Business Central*

- Evaluated ERP platforms for a hypothetical mid-sized industrial manufacturer, comparing platform fit, modernization needs, and business-process requirements.

EDUCATION

California State University, Northridge

Expected Spring 2027

Bachelor of Science in Computer Information Technology | Minor in Computer Science | Emphasis in Chicano History

CERTIFICATIONS & CREDENTIALS

AWS Academy Cloud Foundations | Autodesk Certified User: AutoCAD | Capstone Excel Certified | Capstone Access Database Certified | Trailhead Superbadge: Salesforce Basics

LANGUAGES

English and Spanish (fluent)
